Chennai, Tamil Nadu

Summary

Security-focused Computer Science undergraduate specializing in web application security, penetration testing, and security automation. Experienced in building offensive security tools using Python and Golang, conducting vulnerability assessments, and automating reconnaissance workflows.

Education

Bachelor of Engineering – Computer Science and Engineering

Panimalar Engineering College Chennai, India • Chennai

05/2026

Skills

Penetration Testing, web application security, Vulnerability Assessment, Network Security, Security Automation, Python Programming, Golang Programming, Leadership

Projects

EchoVulnx – Vulnerability Assessment & Reconnaissance Tool. Designed and developed a **multi-purpose security tool** for vulnerability assessment and bug bounty workflows

- Implemented **subdomain enumeration, port scanning, vulnerability detection, cloud asset discovery, and JavaScript analysis**
- Automated reconnaissance and scanning tasks to reduce manual security testing effort
- **Tech:** Python, Bash

VulnX – Offensive Security Framework

- Built a **modular offensive security framework** in Golang with YAML-based workflows
 - Developed customizable reconnaissance and scanning modules for real-world penetration testing
 - Emphasized performance, extensibility, and automation in security operations
 - **Technologies Used:**Golang
-

Experience

Security Engineer

AFOT • Chennai

06/2024

- Conducted **web application security testing** and vulnerability analysis
 - Identified **security misconfigurations and application-level vulnerabilities**
 - Monitored logs and network traffic to detect **suspicious activity**
 - Supported implementation of **security controls and best practices**
-

Languages

English, Tamil
